Appendix Indexation Methodology

Starting July 1, 2014, the Guarantor employs an indexation methodology that meets the requirements provided for in the CMHC Guide to determine indexed valuations for Properties relating to the Loans in the Portfolio (which methodology may be changed from time to time and will, at any time, be disclosed in the then-current Investor Report and each future Investor Report for periods from and after July 1, 2014, the "Indexation Methodology") for purposes of the Asset Coverage Test, the Asset Coverage Test, the Asset Coverage Test, the CMHC Guide and will (i) require notice to CMHC and satisfaction of any other conditions specified by CMHC in relation thereto, (ii) if such update or other change to the Indexation Methodology must comply with the requirements of the CMHC Guide and will (i) require notice to CMHC and satisfaction of any other conditions specified by CMHC in relation thereto, (ii) if such update or other change constitutes a material amendment thereto, require satisfaction of the Rating Agency Condition, and (iii) if such update or other change is materially prejudicial to the Covered Bondholders, require the consent of the Bond Trustee.

Initially, the Indexation Methodology to be employed by the Guarantor will be based on (i) with respect to Properties located within the cities of Vancouver, Victoria, Calgary, Edmonton, Winnipeg, Ottawa-Gatineau, Hamilton, Toronto, Montreal, Quebec City and Halifax, data provided by Teranet through its House Price Index"), and (ii) for Properties located in all other areas of Canada, a property value that is adjusted using the Teranet - National Bank Composite 11 House Price IndexTM (the "Composite 11 House Price IndexTM (the "Composite 11 House Price Index"), which is calculated as a weighted average of the data for the eleven cities included in the House Price Index."

The data derived by the House Price Index is based on a repeat sales method, which measures the change in price of certain residential properties within the related area based on at least two sales of each such property over time. Such price change data is then used to formulate the House Price Index for the related area. Details of the House Price Index and the Composite 11 House Price Index may be found at www.housepriceindex.ca.

Certain risks are associated with the use of composite indices and statistics including the House Price Index and the Composite 11 House Price Index, such as (i) the data provided with respect to larger geographical areas could mask localized price fluctuations, and (ii) data on the growth rate for each type of dwelling is not available because the data provided combines all dwelling types and, therefore, the data provided may not reflect price fluctuations for the different types of dwellings. Accordingly, no assurance can be given that the valuation of the Properties in the Portfolio using the Indexation Methodology will result in an accurate determination of the actual realizable value of a particular Property or of the Portfolio as a whole. The Bank can give no assurance as to the accuracy of the information provided by the House Price Index or the Composite 11 House Price Index.
